TRACK CHANGES

16 These tracking commands allow copyeditors to mark text so that the author can consider whether he/she

17 wants to make the change. In the manuscript version of the article, a list of changes will automatically

18 appear at the end of the article, as you see here.

19 The comments will be seen when `\documentclass[manuscript]{stjour}` is used, but will

20 disappear in the final version, leaving only the suggested change.

21 Thus, if the author doesn't like the change, he/she should delete it before resubmitting his/her manuscript.

22 These commands are used:

23 `\added{}`

24 `\deleted{}`

25 `\replaced{}{}`

26 `\explained{}`

27 Here is some text to illustrate the track changes commands, quotes (with apologies) from Albert Einstein:

28   Two things are (Replaced: ~~almost infinite~~ replaced with: infinite) *[Explanation of change: 'almost' detracts*

29 *from the strength of the statement]* : the universe and human stupidity; and I'm not sure about the universe.

30   The most beautiful thing we can experience is the mysterious. It is the source of all true art and science.

31 (Added: – Albert Einstein)

32   It is the (Added: supreme) art of the teacher to awaken joy in creative expression and knowledge.

33 ***Using [] to add comments to appear in the List of Changes***

34 `\added[]{}`

35 `\deleted[]{}`

36 `\replaced[]{}{}`

37   Two things are (Replaced: ~~almost infinite~~ replaced with: infinite) *[Explanation of change: 'almost' detracts*

38 *from the strength of the statement]* : the universe and human stupidity; and I'm not sure about the universe.

39   The most beautiful thing we can experience is the mysterious. It is the source of all true art and science.

40 (Added: – Albert Einstein)

41   It is the (Added: supreme) art of the teacher to awaken joy in creative expression and knowledge.
